

MeT-RO

[MeT-RO](#) (Metabolomics at Rothamsted) is the result of a major BBSRC initiative to establish a critical mass of resources that can be applied to plant and microbial metabolomics. The project is co-ordinated by the [National Centre for Plant and Microbial Metabolomics at Rothamsted Research](#), and includes important partnerships in bioinformatics and advanced computational techniques with the University of Wales, Aberystwyth and in FT-ICR-MS application to plant samples with the University of Manchester.

See the [OASIS](#) entry for the Aberystwyth component funding.
